# Manufacturing safety for over 40 years

"We are consistent in both quality and performance. This is what separates us from the rest"

**Phillip Joseph**

Managing Director

Through many decades of manufacturing experience and unsurpassed knowledge through research and development, DBA has positioned itself as Australia's most awarded manufacturer and a global leader in brake rotor manufacturing.

Through continuous improvements in engineering along with a thirst for innovation, DBA has managed to consistently re-define and deliver braking solutions for an extensive range of vehicle applications and conditions.

# "From cast iron to the finished product - total control"

After 30 years of design and development with race teams around the world, Disc Brakes Australia developed a proprietary cast iron formulation ( XG-150 ) for use in all of its premium performance disc brake rotors.

DBA's grey iron is rich in carbon and alloyed to produce excellent thermal characteristics, which is a key factor in the production of the casting. This is combined with our patented Kangaroo Paw ventilation design.

With a supersaturated solution of carbon in an iron matrix, the excess carbon precipitates out in the form of graphite flakes. The structural distribution of these graphite flakes provide excellent thermal properties, increasing the thermal shock resistance.

Also, when combined with DBA's TSP process it allows the material to cope with rapid thermal cycling with core-heat levels reaching approximately 700°C and above.

The DBA developed TSP™ process, stress relieves the cast iron during the manufacturing process.

Unlike any other cast irons, the XG-150 formulation was developed to respond to the TSP process resulting in a rotor that is ideal for heavy duty braking and suitable for motorsport applications.

## XG-150 Features & Benefits

Feature	Benefit
High thermal conductivity	<i>Reduced brake fade, improved heat dissipation Consistent brake pedal feel</i>
Thermal Stability	<i>Minimises the risk of brake shudder/judder</i>

## Packaging & Distribution

DBA's Kangaroo Paw  
(to suit a large 4 door sedan vehicle)

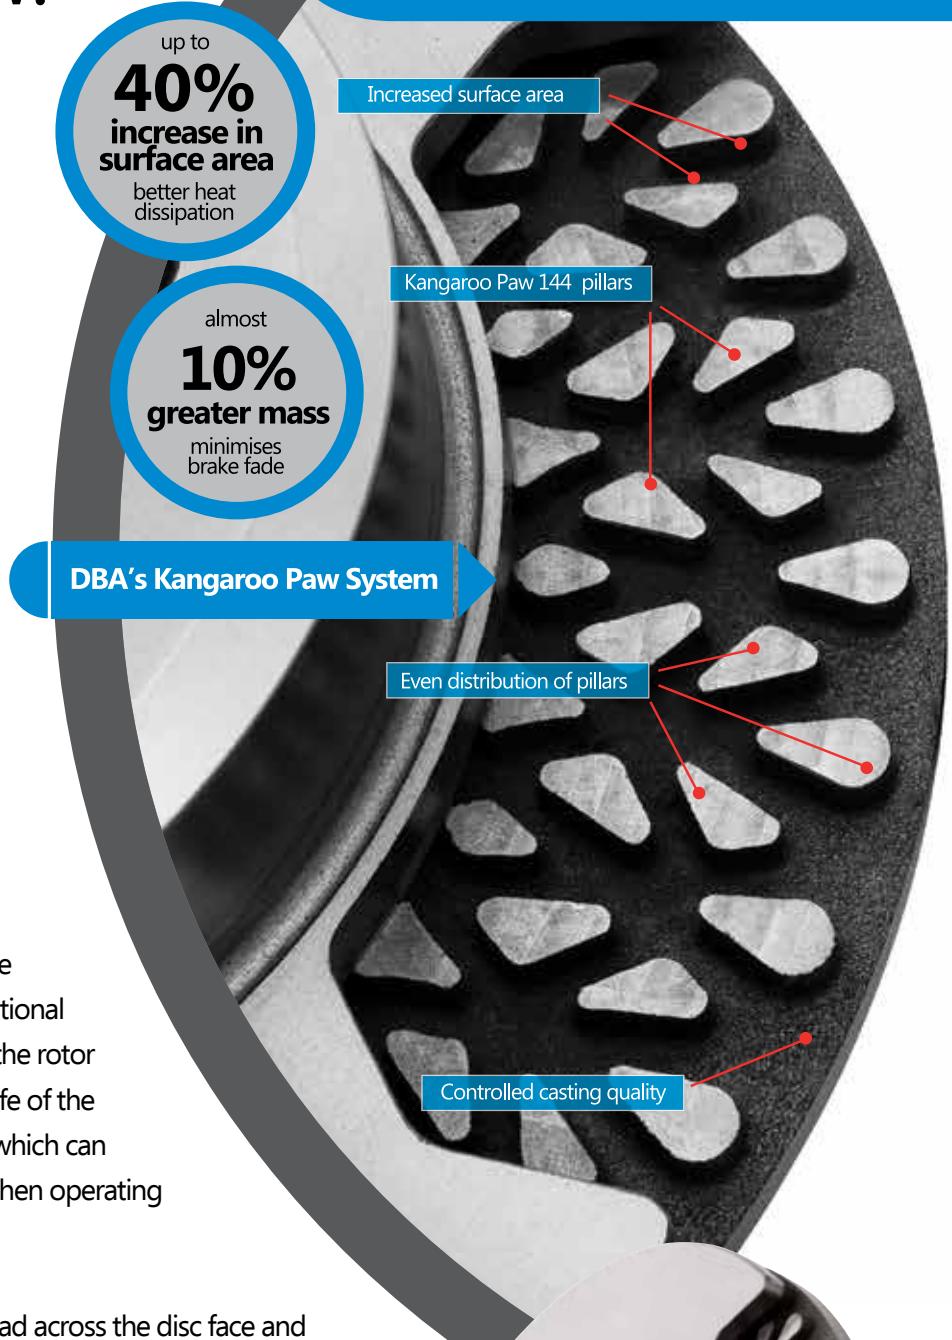

# Kangaroo Paw. Home grown inspiration.

Inspired within Australia's heartland, DBA developed the Kangaroo Paw cooling system. This patented ventilation system provides a much more efficient method of keeping the rotors cool under the heaviest of braking applications.

Using a series of 144 diamond and teardrop patterned pillars (or columns) instead of conventional straight cooling vanes, the design increases cooling efficiency by up to 20% when compared with most other conventional ventilated disc rotors.

As well as providing cooler conditions, the Kangaroo Paw system also provides additional support to the friction face. This enables the rotor to maintain the fine tolerances over the life of the rotor better than a straight vane design, which can "balloon" and swell between the vanes when operating at high temperatures.

The Kangaroo Paw pillars are evenly spread across the disc face and make the rotor stronger, more stable and more consistent in operation.

Comparing the ventilation air space between friction faces of a DBA Kangaroo Paw design and a conventional straight vane sample

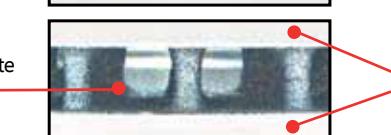

Kangaroo Paw

Increased distance  
between vanes  
reduces surface  
area which will  
affect the rotors  
ability to dissipate  
heat

Straight Vane

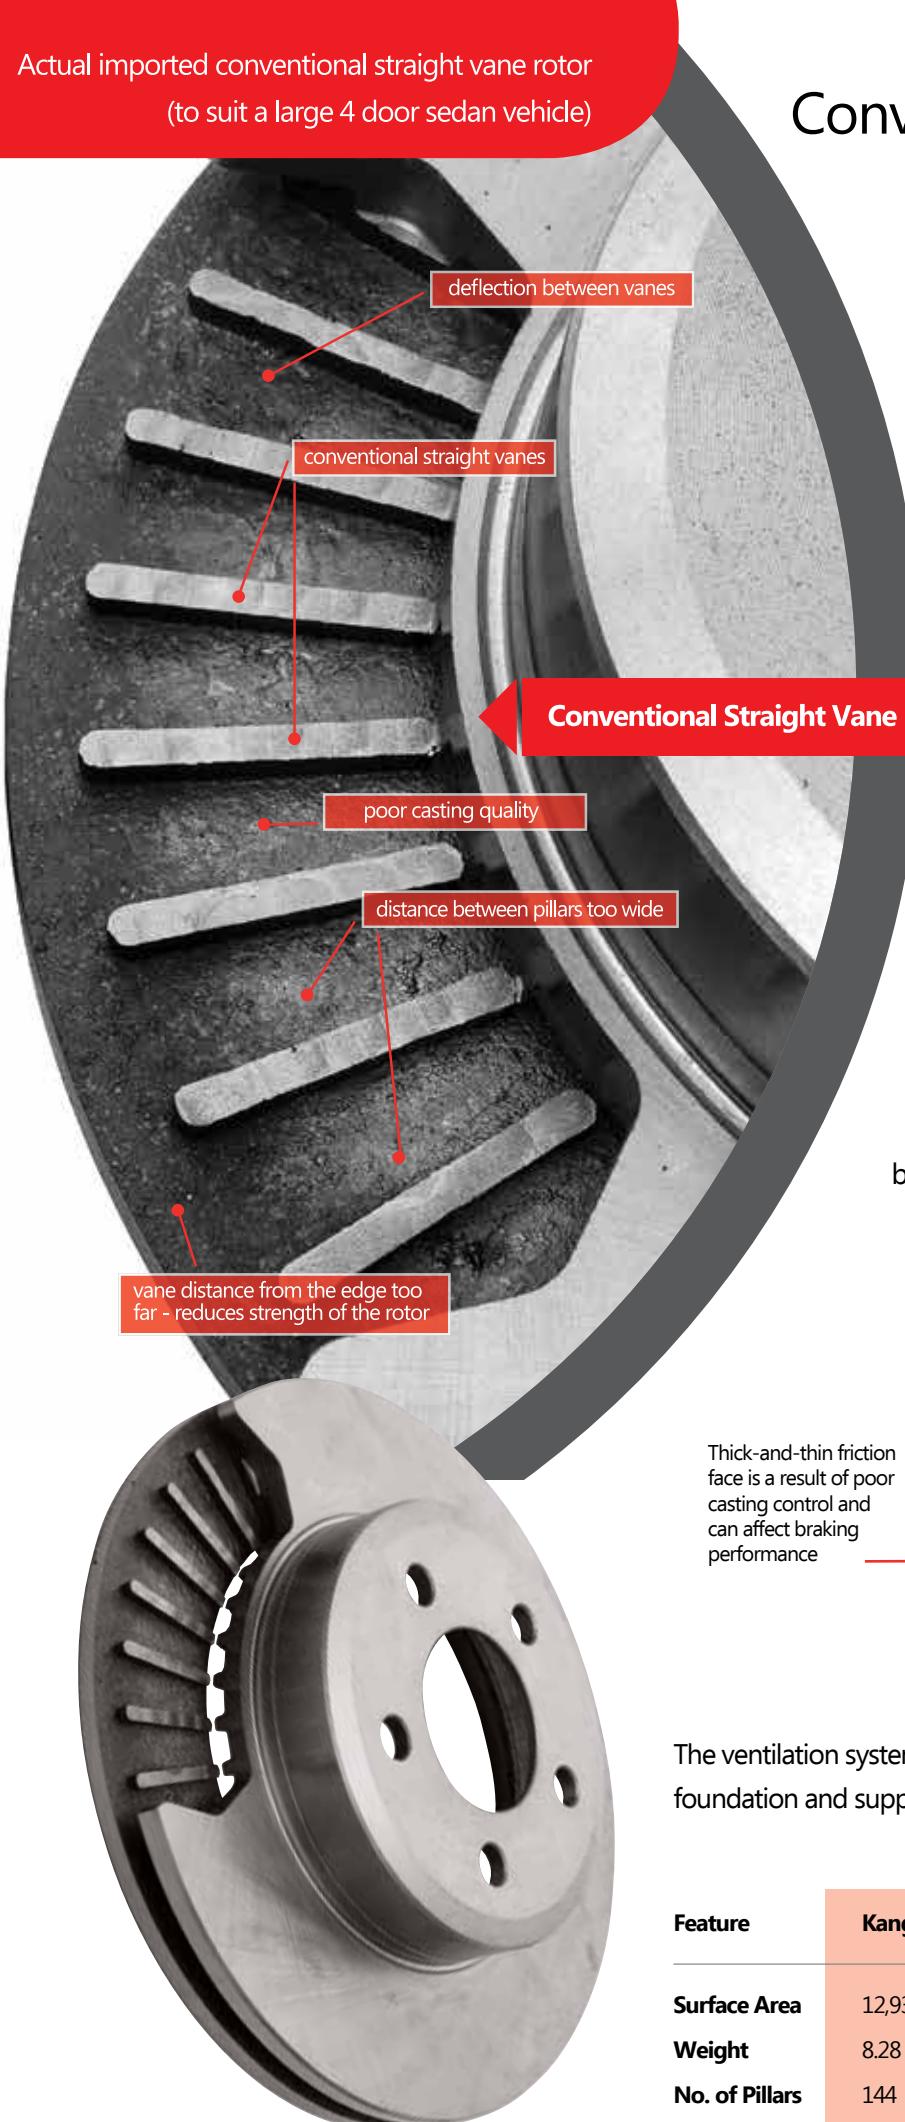

A recent discovery has found that "lightweight" inferior discs have reduced braking plate surface thickness. This is a common method employed to reduce manufacturing costs. The result is lower thermal mass causing unpredictable performance characteristics and sacrificing safety and longevity.

Actual imported conventional straight vane rotor  
(to suit a large 4 door sedan vehicle)

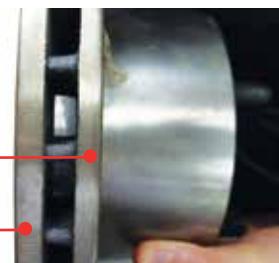

## Conventional straight vane vs

### DBA's Kangaroo Paw cooling system

Other than material composition, another major factor that affects the thermal performance of brake rotors is the surface area within the ventilation design. The more surface area, the more heat that can be removed from the brake rotor.

The mass of the brake rotor also plays an important role. The greater the mass, the more heat that can be stored and must be dissipated, this is why the design of the Kangaroo Paw is so effective. This minimises the risk of brake fade and restores normal braking much sooner.

The ventilation system of a brake rotor is best described as the foundation and support between the friction surfaces.

Feature	Kangaroo Paw	Straight Vane
Surface Area	12,937 mm <sup>2</sup>	8,100 mm <sup>2</sup> = <b>37.3%</b> less surface area
Weight	8.28 kg	7.68 kg = <b>7.25%</b> less mass
No. of Pillars	144	36 = <b>75%</b> less support

# Better materials, better processes...

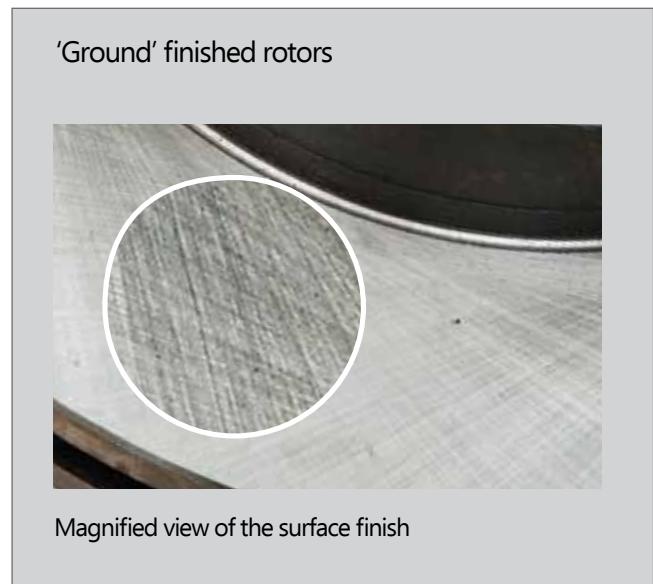

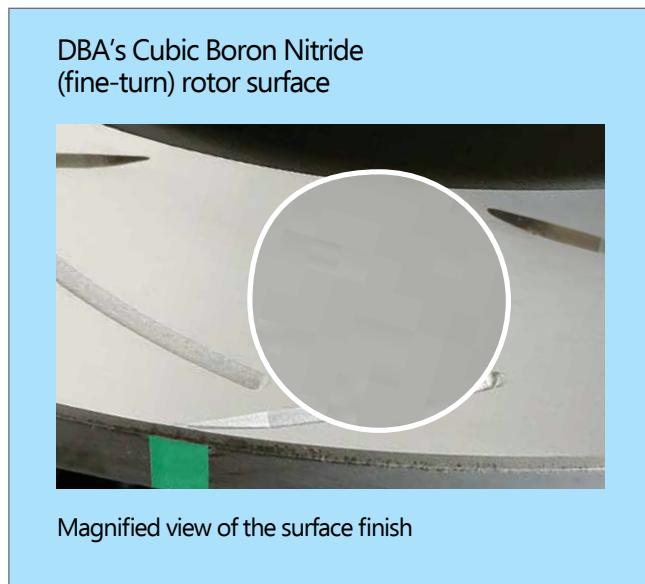

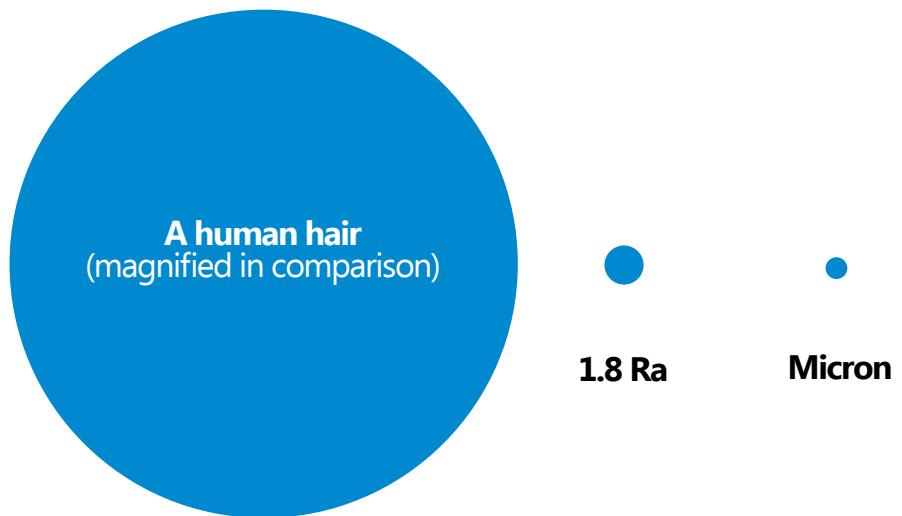

The technologies employed by DBA are at the forefront of brake manufacturing and allows consumers to clearly identify why DBA discs are ultimately superior. The processes adopted by DBA through clever engineering allow consistent and premium performance characteristics, making DBA brake discs do what they do best, **slow down vehicles!**

## Defining elements of DBA discs:

Cubic boron nitride (CBN) is known to be the second hardest material after diamond

**Dimensionally Precise** – Most discs on the market are found to be ‘ground’ finished, but every DBA disc endures a special Cubic Boron Nitride (CBN) fine-turn process. The quality of the finish is measured as a surface roughness (engineering term Ra) in microns. One micron is 1 millionth of a metre (see diagram below). DBA rotors are machined to a maximum of 1.8 Ra or less.

## How big is a Micron?

CBN finishing ensures an even pad transfer layer deposition which is important for the modern brake pad. This leads to a better pedal feel and eliminates the possibility of pad ‘knock’.

# Behind every great wheel should be a great brake disc

**Patented design** – ‘Kangaroo Paw’ is a patented hi-tech disc rotor ventilation system which features a series of 144 diamond and tear drop shaped pillars individually spaced between the rotor faces. This design cools the rotor faster and increases dimensional strength and stability across the disc rotor.

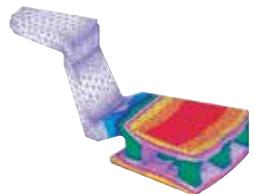

**Performance metals** – Usually only found in high-end performance discs, XG-150 is a unique formulation developed for all DBA products. High carbon alloyed iron may look like regular iron found on standard discs, but DBA’s unique XG-150 iron formula has been tested the world over to the absolute limits of braking punishment.

Graphite flakes in the microstructure of the XG-150 cast iron

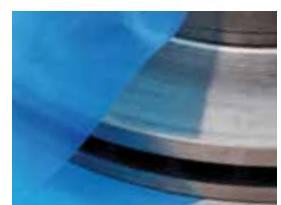

**Built for abuse** – DBA uses a process called thermal stability profiling (TSP) on all 4000 and 5000 discs manufactured with XG-150. TSP re-aligns the micro-structure of the iron, increasing density, resistance to extreme temperature, allowing the rotor to remain dimensionally true.

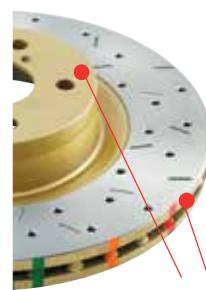

Thermo-graphic paint markings allow clear identification of disc temperature and disc performance.

Initial Colour	When the rotor exceeds this temperature:	The colour will change to:
Green	458°C / 856°F	<input type="checkbox"/>
Orange	550°C / 1022°F	<input checked="" type="checkbox"/>
Red	630°C / 1166°F	<input type="checkbox"/>

**Protection in packaging** – DBA delivers added value to ensure their products are received in perfect condition by covering each and every disc in a moisture proof, corrosion protective dual layer package.

**Premium discs, premium appeal** – The premium paint coating found on all DBA discs\* in non-friction areas ensures corrosion protection. DBA discs aid vehicle appearance and last longer against the elements.

Premium paint coating on non-friction surfaces

\*excludes street series OE replacement discs

## A new standard in slot design

DBA's T2 has greater braking advantages over the traditional straight slot designs.

The Bi-Symmetrical curve slots dampen the vibration harmonics or noise, resulting in a quieter, more responsive and smoother brake pedal feel.

In addition, the T2 increases the number of out-gassing exit points, allowing friction gasses to escape and enhancing the pad bite.

Feature	Advantages	Benefits
<b>T2</b> <b>32 precision CNC machined slots</b>	Bi-Symmetrical curve slots dampens the vibration harmonics	A quieter, responsive and smoother brake pedal feel
	Universal slot design	Eliminates the need for left and right discs
	Increased number of out-gassing exit points for brake pad friction gasses to escape through	Increases the consistency and effectiveness of every brake stop.

4000 & 5000 series

## A new breed of performance braking

DBA's T3 slot design is built on the T2 design but with an increased number of slots, taking it from 32 to 48 CNC machined slots.

The result is an even quieter, more responsive and smoother brake pedal feel. This is achieved from a series of tri-symmetrical 'curved' slots, which when aligned in a specific way, drastically dampen the vibration harmonics, that's commonly associated with traditional straight slot (groove) rotor designs. The tri-symmetrical slots also increase the number of out-gassing exit points for brake pad friction gases to escape through, further increasing the consistency and effectiveness of every brake stop.

Feature	Advantages	Benefits
<b>T3 48 precision CNC machined slots</b>	Tri-Symmetrical curve slots dampens the vibration harmonics	A quieter, responsive and smoother brake pedal feel
	Universal slot design	Eliminates the need for left and right discs
	Increased number of out-gassing exit points for brake pad friction gasses to escape through	Increases the consistency and effectiveness of every brake stop

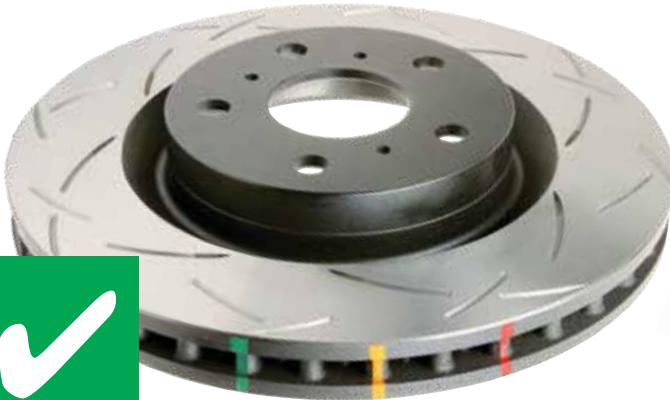

Unique to the ClubSpec 4000 and 5000 series rotors

# Wanting performance disc rotors? Ensure you invest in the latest technology!

VS

Other Brands

## DBA race proven & market leading technology

### Kangaroo Paw vane technology (Guaranteed)

Designed for better pad loading and even weight distribution. Better distribution of cooling air to more of the rotor surface area

### T2 & T3 Slot Design (Guaranteed)

Worldwide patented T2 and T3 universal slot design, for even pad wear, less noise and eliminates the need for a left and right handed product

### Accurate & even disc thicknesses (Guaranteed)

A quality focused and consistent manufacturing process that ensures accurate disc face thickness and correct vane distance, to provide better dissipation of heat

### Surface machining at the micron level (Guaranteed)

Smoother disc surface for better feel and reduced pad wear and is ideal for bedding in high performance pads. Well suited for extreme temperature changes suited for racing

### The best quality cast iron (Guaranteed)

(XG-150) highest grade alloyed iron unlike any other cast irons. The formulation is ideal for heavy duty braking when TSP is applied

## Performance imitations using dated technology

### Straight vane design (Out dated)

Common in standard rotors. Not suited to heat generated in high speed braking scenarios

### Antiquated slot and/or drill design (Out dated)

Less responsive, noisier and an old style design that is common on the cheaper style products. Supplied as left and right hand parts and if fitted incorrectly will affect performance

### Inaccurate disc thicknesses (Out dated)

Cheap, inferior manufacturing process causing uneven structure that will affect braking performance. Increased distance between vanes reduces surface area which will affect the rotors ability to dissipate heat, a major contributor to disc thickness variation, resulting in brake shudder

### Inferior surface machining (Out dated)

Harsher on performance brake pads and can affect the bedding in process. Less resistant to severe changes in rotor temperature

### Cheaper cast iron quality (Out dated)

Standard grey iron found in stock brake rotors is not designed for repetitive high speed braking

John Bowe

Legend of Australian Motorsport

"In any race car, it's not all about how quick the car is, it's more often about how well it stops. So, when it comes to brakes I'm a pretty good judge. When you're looking for great brakes, look no further than DBA's performance ClubSpec range with Ferodo DS Performance brake pads; the perfect combination from DBA.

John Bowe, V8 Supercar Legend"

## DBA En-Shield Direct OE Replacement Disc Rotor

New to DBA's stable of quality disc brake rotors is the En-Shield Direct OE Replacement Disc Rotor.

En-Shield coating is chromium-free, non-toxic water-based, enviro-compliant coating designed to protect the entire disc rotor surface from rust and corrosion and is specifically formulated to prevent brake pad contamination.

En-Shield brings a rotor finish that has traditionally only been seen on OE product, to the Australian Aftermarket.

- ✓ Baked on protective coating over the entire disc rotor.
- ✓ Fully protected against environmental attack.
- ✓ Chromium-free, water-based, environmentally safe coating.
- ✓ Ready to go. No brake cleaner! Save fitment time!
- ✓ Coating is designed to not contaminate the brake pad.
- ✓ EN-SHIELD offers the genuine OEM appearance.

Featuring DBA's Patented Kangaroo Paw Ventilation System.

No more rust!

## Overview

Sharing all the benefits of the HD and Survival 4x4 series, we are now witnessing the ultimate in performance direct OE replacement discs. Inclusive of a tri-symmetrical slot design dampening harmonics, increasing responsiveness and improving that all important 'pedal feel'.

The 6061-T6 Alumalite hats on the Club Spec 5000 T3 are critical for reducing wear and reducing weight.

The Aerospace grade aluminium hats reduce unsprung weight, allow for uniform disc expansion and lower heat transfer from disc to hub.

Replacement  
Disc Rotor Only  
(without Hat)

# Fitting a hat-type disc rotor

The following steps are recommended to ensure the best possible results after fitting a hat type disc rotor:

1. Remove wheel.
2. Remove brake pads and push caliper piston back. Start by first loosening the bleeder so as not to push contaminated fluid into the system. Check caliper condition e.g. slides are not stiff or worn.
3. Remove caliper from its supports without disconnecting brake line, making sure to secure it without letting it hang.
4. Remove old brake rotor.
5. Check hub bearings for wear, replace as necessary (refer to the vehicles manual for exact specifications).
6. Remove any scale or grit off hub face to ensure positive contact with the inside of the new rotor.
7. Fit new disc rotor to hub making sure it is indexed to a point with minimum run-out (using a radial dial indicator).
8. Refit brake caliper.
9. Clean any grease or foreign material off the rotor with Brake Cleaner.
10. Select correct brake pads to suit the style and driving conditions of the driver and vehicle.
11. Check brake fluid condition and replace as necessary. Do not flush dirty fluid through the system, remove dirty fluid from reservoir first.
12. Refit wheel, tightening wheel nuts in correct sequence and to recommended torque settings.
13. Carry out road test and bedding-in procedure. Refer to brake pad manufacturer's bedding in procedure.
14. Ensure vehicle owner understands that the rotors will take approximately 300km to bed-in.

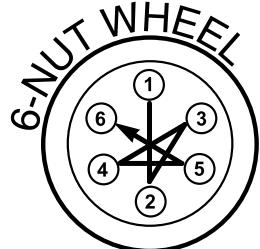

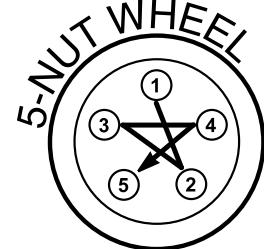

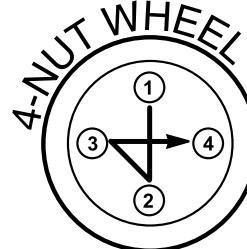

**Dirty hub face**

**Clean hub face**

## Tightening wheel nuts

Tighten the nuts following the criss-cross sequence shown below. Failure to tighten nuts in the criss-cross sequence will cause misalignment of the wheel. Continue this process until all nuts are tightened to the torque recommended by the vehicle manufacturer. Wheels supplied as aftermarket accessories may require different wheel nut tightening torques. If in doubt seek advice from the manufacturer or supplier.

* IMPORTANT INFORMATION. The wheel stud P.C.D. of ALL the above Chrysler 300C + Dodge Charger discs are definitely 115 mm. Correct P.C.D. wheels must be fitted. DO NOT install any replacement wheels which have a wheel stud PCD of 114.3 mm = 4.5 inch, because this will cause distortion of the BEARING HUB mounting face when the wheel nuts are tightened. A new HUB will need to be installed to rectify the problem, if a wrong wheel is fitted. Please advise your customers, failure to follow the above information will void any warranty.

\*The minimum thickness of the DBA 131 & 132 has been revised to Fords current specifications and now covers all year models of the EF, EL, XH Falcons. As a result the DBA135 will be discontinued once stock is exhausted. The manufactured thickness of the DBA 131 & 132 has remained at 25mm as the caliper has not been revised over any of these models.

### Holden VE HSV – Special Edition Curve Slot Design

Utilising an OE like, directional slot design, the DBA VE HSV 4000 and 5000 Series rotors ensure optimal braking performance whilst retaining the factory look.

**Suits: Holden VE HSV's excluding GXP and W427 Vauxhaul VXR8 and Maloo.**

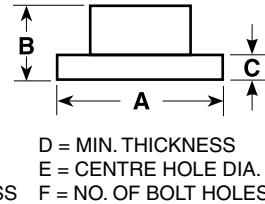

Front - 5000 Series  
 DBA52030BLKSL  
 &  
 DBA52030BLKSR

Front - 4000 Series  
 DBA42030SL  
 &  
 DBA42030SR

Rear - 4000 Series  
 DBA42031SL  
 &  
 DBA42031SR

### PART SUPERCESSION for SUBARU WRX STi

DBA is now introducing a 10 stud hole pattern disc brake rotor to suit the Subaru WRX STi range of models combining two sets of PCD's together on the one disc:

2002-2004 – disc rotor stud hole PCD (pitch circle diameter) = 100 mm  
 2005-2009 – disc rotor stud hole PCD (pitch circle diameter) = 114.3 mm

**DBA 4654S-10**

PART #    SLOTTED    10 STUD HOLE PATTERN

The benefits:

1. Universal fitting
2. Eliminates variations in part numbers
3. Reduced stock levels

**Figure 1.** (right side of the page) illustrates the combined PCD patterns, including the two smaller extraction holes.

**One part fits all.**

All other rotor dimensions remain the same.

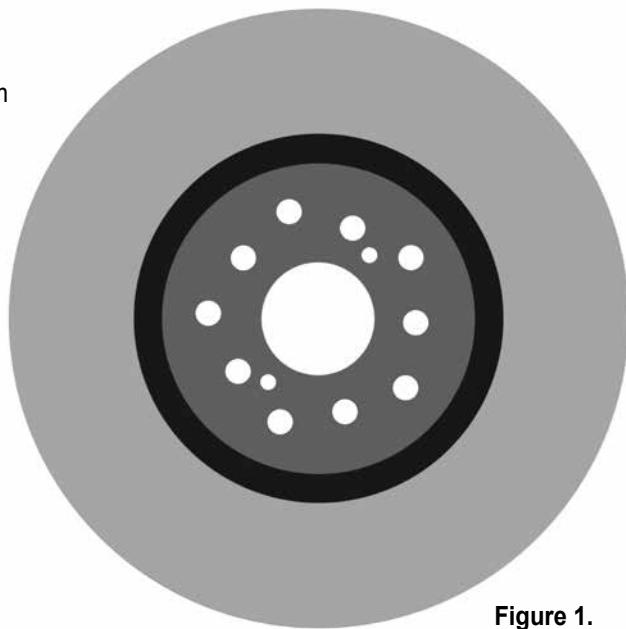

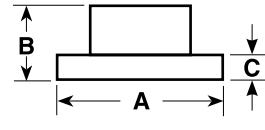

Figure 1.

MADE IN  
ITALY

**RACE SPEC PADS FOR ROAD USE**  
**ULTIMATE STOPPING POWER**  
**FADE RESISTANT**

**DS**  
**PERFORMANCE**

- ✓ Track Level Friction for reduced stopping distance
- ✓ Excellent Performance in all conditions (hot/cold/wet/dry)
- ✓ Thermal under-layer eliminates fluid boil
- ✓ Low compressibility and wide thermal range
- ✓ Manufactured in Italy by Ferodo Racing Facility

#### Part range and availability:

Part range and stock availability as per our current landed stock. This will change and increase over time as demand and inquiries are processed.

#### Placing an order:

Purchase orders to be sent to DBA:  
[orders@dba.com.au](mailto:orders@dba.com.au)

#### Minimum orders and delivery times for current account holders ONLY:

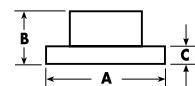

There is no minimum order quantity restriction.

Chargeable satchels up to 5 kgs can delivered next day to all major Australian cities.

Larger quantity orders will be shipped and charge as per DBA's national carrier system.

## **Warranty Statement**

Standard Communications Warranty against defects

**IMPORTANT: THIS WARRANTY APPLIES TO ALL GOODS SOLD BY US ON OR AFTER 1 JANUARY 2012 AND IT REPLACES ANY PREVIOUS WARRANTY STATEMENTS IN RELATION TO SUCH GOODS.**

1. This warranty against defects ("Warranty") is given by Disc Brakes Australia Pty Ltd ABN 12 003 543 995 of address Unit 33 / 2 Slough Avenue Silverwater NSW 2128 Australia ("We, Us, Our or DBA").  
This Warranty only applies to products purchased in Australia. Please contact your local DBA distributor for products sold outside of Australia.  
Local distributor details at <http://www.dba.com.au/where-to-buy/>
2. **Warranty**
  - 2.1 We warrant, to the original purchaser ("You") that Our goods will be free from defects in materials and workmanship for 12 months or 20,000 kms (12,000 miles) from the date of purchase whichever occurs earlier ("Warranty Period), provided that subject to Our obligations under clause 2.3, We will at Our option either repair or replace goods where:
    - (a) We are satisfied that the goods are defective; and
    - (b) Freight charges both ways are paid for by You and We accept no liability for loss or damage during transit.
  - 2.2 No repair or replacement during the Warranty Period will renew or extend the Warranty specified in this clause;
  - 2.3 Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.
  - 2.4 Notwithstanding the preceding clause, Our liability in respect of a breach of a consumer guarantee, condition, warranty or other obligation made under this Warranty is limited, to the extent permissible by law, at Our option to:
    - (a) in the case of goods We supply;
      - (i) the replacement of the goods or the supply of equivalent goods;
      - (ii) the repair of the goods;
      - (iii) the payment of the cost of repairing the goods or of acquiring equivalent goods;
      - (iv) the payment of the cost of having the goods repaired.
    - (b) in the case of services We supply;
      - (i) the supplying of the services again;
      - (ii) the cost of having the services supplied again.
  - 2.5 To the extent permitted by law, all other warranties whether implied or otherwise, not set out in this Warranty are excluded and We are not liable in contract, tort (including, without limitation, negligence or breach of statutory duty) or otherwise to compensate You for:
    - (i) any increased costs or expenses;
    - (ii) any loss of profit, revenue, business, contracts or anticipated savings;
    - (iii) any loss or expense resulting from a claim by a third party; or
    - (iv) any special, indirect or consequential loss or damage of any nature whatsoever caused by Our failure in complying with our obligations.
  - 2.6 We warrant that We will perform any Warranty services with reasonable care and skill and agree to investigate any complaint regarding Our services made in good faith. To the extent permitted by law, Our liability in relation to such services is limited to matters set out in clause 2.4(b) provided that We are satisfied that the complaint is justified.
  - 2.7 To make a claim pursuant to this Warranty You must, before the end of the Warranty Period, contact the reseller, distributor or workshop from where You purchased the product and follow their warranty claim instructions. In the event that the reseller or repairer is no longer trading, please phone DBA on 1800 730 039 where you will be assisted.
  - 2.8 This Warranty is in addition to and does not limit, exclude or restrict your rights under the Competition and Consumer Act 2010 (Australia) or any other mandatory protection laws that may apply.
  3. **What this warranty does not cover**
    - 3.1 This warranty will not apply in relation to:
      - (a) goods modified or altered in any way;
      - (b) defects and damage caused by use with non standard tools
      - (c) repairs performed other than by an authorised mechanical or brake expert;
      - (d) defects or damage resulting from misuse, accident, impact or neglect;
      - (e) goods improperly installed or used in a manner contrary to the relevant instruction manual; or
      - (f) goods where the serial number part number on the product has been removed
      - (g) all associated components are within recommended specifications
      - (h) the rotor that has been subjected to conditions beyond those for which it was intended, such as, but not limited to, being used in any form of motor sport.

## **Motorsport Warranty Statement**

DBA's warranty will not apply in relation to: use of the product for any form of motorsport or speed trial.

Whilst DBA promote its product for use in motor sport applications, DBA cannot warrant the product when used in any form of motor sport because it may be subjected to many variables that are not controllable (such as vehicle modifications, ie. wheels, tyres, suspension).

DBA cannot be held responsible for fitment if; not installed by a licensed motor mechanic or licensed brake specialist, wear and tear and lack of maintenance, including situations, where DBA's product is used past the design limits.

This by no means detracts from the quality of the product DBA manufacture, its simply states that if the product is used in motor sport applications, DBA have no control on how or by whom the product is used.

# Motorsport – important information

There are many factors that directly affect the longevity of disc rotors and the safety of the driver when using a high performance street vehicle on a race track.

The major considerations are listed below:

## 1 CORRECT BEDDING OF ROTORS

Generally, experienced drivers will use their track rotors on the street with standard pads for a week or two before any track use. Driving in normal traffic conditions for 200 to 300 km (180 miles) is more effective and less likely to prematurely fatigue the disc rotor material.

If you are unable to utilise this method or prefer the accelerate and brake repetition shortcut, please warm your brakes up first. Drive for at least 1-2 kms (1 mile), with long easy braking. The thermal shock from braking at high speed on cold rotors WILL prematurely fatigue your brakes.

## 2 PAD SELECTION

Standard street pads are NOT suitable for track day applications. Core Temperatures of rotors used on track days are generally in the 450°C to 600°C (1110°F) range and peak surface temperatures up to 800°C (1470°F) for 5 seconds or more.

Street pads will generally start to break down at 300°C to 350°C (570°F to 660°F), causing brake pad fade and glazing of the rotor surface. Also the pad structure is degraded resulting in poorer product performance.

## 3 WARM UP & COOL DOWN

Disc rotors must be preheated before track sprints to reduce the thermal shock from sudden high speed braking. The greater the difference in rotor temperature from when the pedal is applied to when the pedal is released, is directly proportional to metal fatigue.

This is also applicable after the event, when you exit the track. A cool down lap is advisable at reduced speed with lighter braking to lower the core temperature slowly, or if this is not possible, go for a short drive off the track for a few minutes.

Do not pull up immediately after exiting the track with hot brakes if you plan on using them again!

NOTE : Applying the hand-brake on hot rotors after a track session will distort the rear discs as they cool down.

## 4 POST TRACK DAY ROTOR INSPECTION

All disc rotors should be inspected after track day events. This involves removing the rotor from the vehicle and inspecting for heat checking (surface cracking) and severe cracks from fatigue on the pad surfaces. If a suspected crack is found, rub the area with a light grade emery paper, 240 grit or higher, to confirm that it is a crack and not leaching or etching from the pad material.

Pad etching looks similar to light cracking but will disappear with a light rub with emery paper. If the heat checking is advanced to the point where the surface cracks are clearly visible, discard the pair of rotors. One ideal method that should be adopted is to have two sets of rotors.

One set for track use and one for street use. Changing to your street rotors after a track event encourages rotor inspection. Also, your street rotors can become your next track rotors with the advantage of being bedded in gradually. After the initial purchase of two sets of rotors you are still only replacing one set at a time.

## 5 ROTOR TEMPERATURES

Rotor temperature analysis is one method that can be used to enhance your driving technique. The use of thermo-graphic heat paint is the simplest method to record temperatures. To maintain optimal disc rotor life, the core temperatures should not exceed 630°C (1160°F). If you are exceeding this limit you should reconsider pad grades and driving technique. Take note of the time and distance the brakes are applied into a corner and compare them to other drivers. One or two seconds of additional braking can make a substantial difference in rotor temperature and product life.

### THERMO-GRAPHIC TEMPERATURE MONITORING

Markings are placed on the outer edge of each rotor

Initial Colour	When the rotor exceeds this core temperature:	The colour will change to:
GREEN	458°C / 856°F	WHITE
ORANGE	550°C / 1022°F	YELLOW
RED	630°C / 1166°F	WHITE

### Safe operating temperatures of brake fluid.

Brake Fluid Type	Dry Boiling Point <sup>A</sup>	Wet Boiling Point <sup>B</sup>
DOT 3	205°C / 401°F	140°C / 284°F
DOT 4	230°C / 446°F	155°C / 311°F
DOT 5.1	260°C / 500°F	180°C / 356°F
DOT 4/600	310°C / 590°F	216°C / 420°F

A Dry Boiling Point is the temperature at which a brake fluid will boil in its virgin non-contaminated state.

B Wet Boiling Point is the temperature at which a brake fluid will boil after it has been saturated with moisture.

Special Note : It is recommended that the brake fluid is changed every two years / 50,000kms (31,000 miles), or as recommended by the brake fluid manufacturer.

### Maximum continuous working temperature of brake pads.

C.W.T. = Continuous Working Temperature

Brake Pad Type	Maximum C.W.T.	Friction Classif'n
Standard	280°C / 536°F	FF
Semi-Metal	400°C / 752°F	EF
Performance	500°C / 932°F	GF
